GetWellSoon : GetWellSoon is a platform where a particular patient can register and book an appointment. Patients can fetch the list of doctors and can see their details related to their qualification, experience, fees, address etc.

Below are some features of GetWellSoon:-

- **Table List:-**

1. Patient Table: This table stores the necessary data of all the patients registered to the GetWellSoon. Important details such as Name, Age, Phone, Address etc. are fetched from the patients.
2. DoctorList Table: This table contains the details of all the doctors registered with GetWellSoon. Important details such as Name, Email, Phone, Address etc. are fetched from the doctors.
3. AppointmentData Table: This table contains the details of all the appointments made by the patients. It contains the details such as Appointment ID, details of the patient and doctor, date of appointment and fee paid to the doctor etc.

- **Software Requirements:-**

1. IDE: Eclipse 2022
2. Programming Language: Java
3. Database: MySQL
4. API Documentation: Swagger API
5. Framework: SpringBoot
6. Version Control - Git
